

autoUpdater API

- Permet de mettre à jour facilement l'application
- Ajout de releases notes
- Mise à jour automatique ou manuelle
- Fonctionne avec différents mécanismes de mise à jour : Squirrel framework, electron-updater (module d'electron-builder)

autoUpdater API

```
autoUpdater.on('checking-for-update', () => {
  console.log('The autoUpdater is checking for an update')
})

autoUpdater.on('update-available', () => {
  console.log('The autoUpdater has found an update!')
})

autoUpdater.on('update-available', () => {
  console.log('The autoUpdater has found an update and is now downloading it!')
})

autoUpdater.on('update-not-available', () => {
  console.log('The autoUpdater has not found any updates :(')
})

autoUpdater.on('update-downloaded', (event, notes, name, date) => {
  console.log('The autoUpdater has downloaded an update!')
  console.log(`The new release is named ${name} and was released on ${date}`)
  console.log(`The release notes are: ${notes}`)

  // The update will automatically be installed the next time the
  // app es. If you want to, you can force the installation
  // now:
  autoUpdater.quitAndInstall()
})
```
