Electron Menu API

```javascript
const { app, Menu } = require('electron')
const template = [
  {
    label: 'Edit',
    submenu: [
      { role: 'undo' },
      { role: 'redo' },
      { type: 'separator' }
    ]
  },
  {

    role: 'help',
    submenu: [
      {
        label: 'Learn More',
        click: async () => {
          const { shell } = require('electron')
          await shell.openExternal('https://electronjs.org')
        }
      }
    ]
  }
]
const menu = Menu.buildFromTemplate(template)
Menu.setApplicationMenu(menu)
```

Electron net API

- Requêtes HTTP/HTTPS utilisant la librairie réseau native de Chromium

  - Configuration des proxys automatique

  - Support des proxys avec authentification basic, digest, NTLM, Kerberos

  - Permet l'utilisation de proxy de debogage (Fiddler, Charles…)

```javascript
const { net } = require('electron')

const net.request('http://www.orange.fr')

request.on('response', (response) => {
  response.on('data', (chunk) => {
      console.log(`BODY: ${chunk}`)
  })
})
request.end()
```
